

Bug summary:

App crashes when height & weight input

Observed Behavior (a description of what happened with the app):

App prompts for height and weight, on BMI tab and crashes once user gives input

Expected Behavior (a description of what you expected to happen):

the expected behavior is to return the BMI using the user input

Steps to Reproduce (the steps to reproduce the problem):

1. navigate to statistics tab
 2. hit on bmi calculator
 3. input any value for height and weight
