

**Bug summary:**

Application has stopped

---

**Observed Behavior (a description of what happened with the app):**

I wanted to calculate BMI. So I go to the statistics page and press BMI Calculator button. Then I put the value of height and weight. When I pressed Go button the application got crushed and stopped working.

---

**Expected Behavior (a description of what you expected to happen):**

I expected it would show me the BMI after proper calculation.

---

**Steps to Reproduce (the steps to reproduce the problem):**

1. Go to statistics page and press BMI calculator button
  2. Put the values of height and weight
  3. Press go button to calculate the BMI
