

Bug summary:

app crashes when feeding new additive to a plant

Observed Behavior (a description of what happened with the app):

after adding a new plant, I save the plant. I then click on the plant and click feed. I click on "new additive" and add a test description and ml amount. When I click OK it says GrowTracker has stopped.

Expected Behavior (a description of what you expected to happen):

after adding a new plant and saving it, I expect to feed with a new additive. When I create the new additive, the app should not crash.

Steps to Reproduce (the steps to reproduce the problem):

1. Allow Permissions
 2. click Red +
 3. enter test & test for name & strain
 4. click green checkmark in the top left
 5. click on the test plant
 6. click Feed
 7. click + New Additive
 8. enter test description and ml amount
 9. click ok, app crashes
-

Additional information:

I have included a screenshot of the crash screen.
