

Bug summary:

App failed when attempting to calculate BMI

Observed Behavior (a description of what happened with the app):

In the "statistics" feature, entering height and weight in BMI Calculator yielded error message: "DroidWeight has stopped" with option to open app again.

Expected Behavior (a description of what you expected to happen):

I expected the app to calculate BMI based on the numerical inputs.

Steps to Reproduce (the steps to reproduce the problem):

1. Click "Statistics," top center button.
 2. Click "BMI Calculator," bottom of screen.
 3. Enter "50" in height field and "60" in weight field, click "Go" button.
