Bug summary:

search function in SEARCH ITUNES not working properly

Observed Behavior (a description of what happened with the app):

I searched "mis" in SEARCH ITUNES, trying to add a new podcast, but it shows "org.json.JSONException: No value for feedurl".

Expected Behavior (a description of what you expected to happen):

Show the list of podcasts that contains "mis" in their titles.

Steps to Reproduce (the steps to reproduce the problem):

1. click the three lines at the top left corner, click "Add Podcast"

2. click "SEARCH ITUNES"

3. click the magnifyer icon on the top right corner, search "mis" there

---

Additional information:

Sometimes, the search function works, but sometimes just not. Even when I see there's "The Daily" podcast there, but if I search "daily", it gives me no results.
