Bug summary:

Add Token does not create token

Observed Behavior (a description of what happened with the app):

I created a test token (named it "test") with a random seed and no other information provided and it did not show up when i hit "done". This was also the first ever token I had created (I didn't have other tokens) so maybe that plays a role. Additionally, it was an "Event token" and I didn't enter anything in the serial # field or OTP length field (OTP was prefilled with 6 I believe).

Expected Behavior (a description of what you expected to happen):

I expected my newly created "test" token to appear

Steps to Reproduce (the steps to reproduce the problem):

1. Launch app

2. Hit add token from the dropdown menu in the top right

3. type the name you'd like for your token (I used "test")

4. Enter nothing in the Serial # field and do not change the OTP length just hit next

5. Hit generate random seed

6. Hit complete

7. Observe that token is not created
